

Pylon Solutions

Your Network Management and Security Company

Secure Managed Network Services

Description

If your company is like most, it cannot function effectively or even compete in today's market without a high performance network. It is the single most vulnerable area within any company's information technology environment. The Secure Managed Network Services program from Pylon Solutions ensures that your network is properly designed, proactively monitored, and maintained at its optimum security.

Pylon Solutions will provide all your network gear based on a design formulated by our highly qualified staff. Your network will be centrally monitored from our Network Operations Center (NOC) equipped with leading network management solutions. Our staff will ensure your firewalls are properly configured and continuously updated with the latest security updates. We will provide and maintain your VPN system and user accounts. Your routers and switches will be properly configured with appropriate Quality of Service parameters. Spam and Virus filtering will be provided for your E-mail accounts. All of that and more are provided to you at a fix low monthly fee.

What Is Included

As part of the program, Pylon Solutions will provide all your LAN switches, routers, firewall, and VPN appliances. Additionally, the service includes E-mail Spam and Virus filtering protection. Pylon Solutions will maintain all provided gear and proactively monitor your network for alerts and outages.

Benefits

A partial listing of benefits would include:

- Near zero cost to have a professionally designed network
- A network built on industry leading equipment

- Proactively monitored and securely maintain network
- Minimal administration costs
- No annual warranty and support contracts
- And much more

Can You Buy Your Own Gear?

Absolutely! As part of our proposal, we will include the option to purchase your own gear and employ Pylon Solutions for secure monitoring and management services. As long as you purchase equipment that adheres to Pylon Solutions' specific product and design standards, procuring your own gear is not a problem.

What About VoIP?

As the company behind My IP Telephone and My IP University, we know VoIP! The engineering staff at Pylon Solutions will configure your network to best utilize your existing VoIP solution, and can include a VoIP system (IP-PBX) as part of the overall managed service. If you happen to be considering VoIP or a change in your telephony system, we need to talk.
